

**Philip Harris**

I am a recent graduate of the University of Denver (DU), with majors in Computer Science and Russian. During my time at DU, I participated in various programs, including Student Government (as a Senator and Webmaster), the Pioneer Leadership Program (PIP), and the Residence Hall Association. PLP in particular focused on civic service and commitment to the community. Through the program, we were able to develop a program where the campus meal provider would donate a portion of the unused meal credit towards the Denver Food Bank. the 2009-2010 academic year, I studied abroad in Moscow, Russia, and during my time there was a volunteer science educator at the Montessori School of Moscow.

Professionally, I started work with NASA in January 2007 as a cooperative education student. I worked at NASA locations both here in Houston and also in California as an engineer. I am now full-time at NASA JSC, working in Mission Operations, in the Flight Planning and International Operations branches. These branches coordinate the space station program across all of the international partners to develop a plan of operations for the day to day use of the space station.

Outside of work, I enjoy fencing, scuba diving, curling, and spending time with my friends and family.
